

## **Darling Environmental and Surveying Receives DBE/WBE/SBE Certification**

Darling Environmental & Surveying, Ltd., today announced that it has been granted certification as a Disadvantaged Business Enterprise (DBE), Women Business Enterprise (WBE), and Small Business Enterprise (SBE) by the City of Tucson, Arizona. This certification is significant because many projects require a certain percentage of work to be performed by minority-owned firms to ensure a diversity of participation.

“This is tremendous news for government agencies, architects, engineers, contractors, subcontractors and building owners, and for anyone else in the building trade working in the Southwest,” said Mary Darling, CEO and principal owner of Darling Environmental & Surveying, Ltd.

“In the Southwest, there are very few DBE/WBE/SBE-certified companies that specialize in 3D laser surveying and scanning of buildings and topography and environmental consulting, so this certification is good news for firms that need to demonstrate minority participation on design and construction projects,” Ms. Darling said.

Locally owned and operated, Darling Environmental & Surveying, Ltd specializes in construction project information management and pre-construction and construction as-built documentation in 3D, including the 3D laser scanning, post processing and building information modeling (BIM) for construction.

Darling Environmental & Surveying, Ltd is dedicated to working with clients to expedite construction while keeping costs in check through the use of state-of-art 3D laser technology.

“Being technologically in a league of our own for 3D laser scanning is very important to us. We are coordinating conventional land surveying and 3D scanning to gather the existing as-built data for shovel ready construction projects, infrastructure, and monitoring” said Ms. Darling. When traditional land surveying and environmental permitting are needed, Darling has the Registered Land Surveyors and biologists to provide one stop shopping.

“In addition to being one of the few DBE / WBE / SBE certified 3D Scanning and Environmental Consulting firms in the Southwest, members of the design and construction industries will benefit from doing business with Darling Environmental & Surveying, Ltd because precision spatial measurement is what we do – and we do it well,” Ms. Darling said.

About Darling Environmental & Surveying, Ltd

Darling Environmental & Surveying, Ltd. is a Tucson-based firm that specializes in 3D laser scanning of topography, buildings, bridges, airports and roads. The company also offers environmental permitting service and traditional land surveying throughout the lifecycle of design and construction projects.

Darling Environmental & Surveying, Ltd. uses four different 3D laser scanners depending on the clients' needs. They offer AutoCAD 2D and 3D, PolyWorks, Revit, and Leica TruView deliverables for their state-of-the-art 3D information. In doing so, Darling provides "smart" technology; enhanced communication, major cost and time savings, and significant benefits by maximizing the ability of engineers and architects to utilize 3D imagery for their projects.
